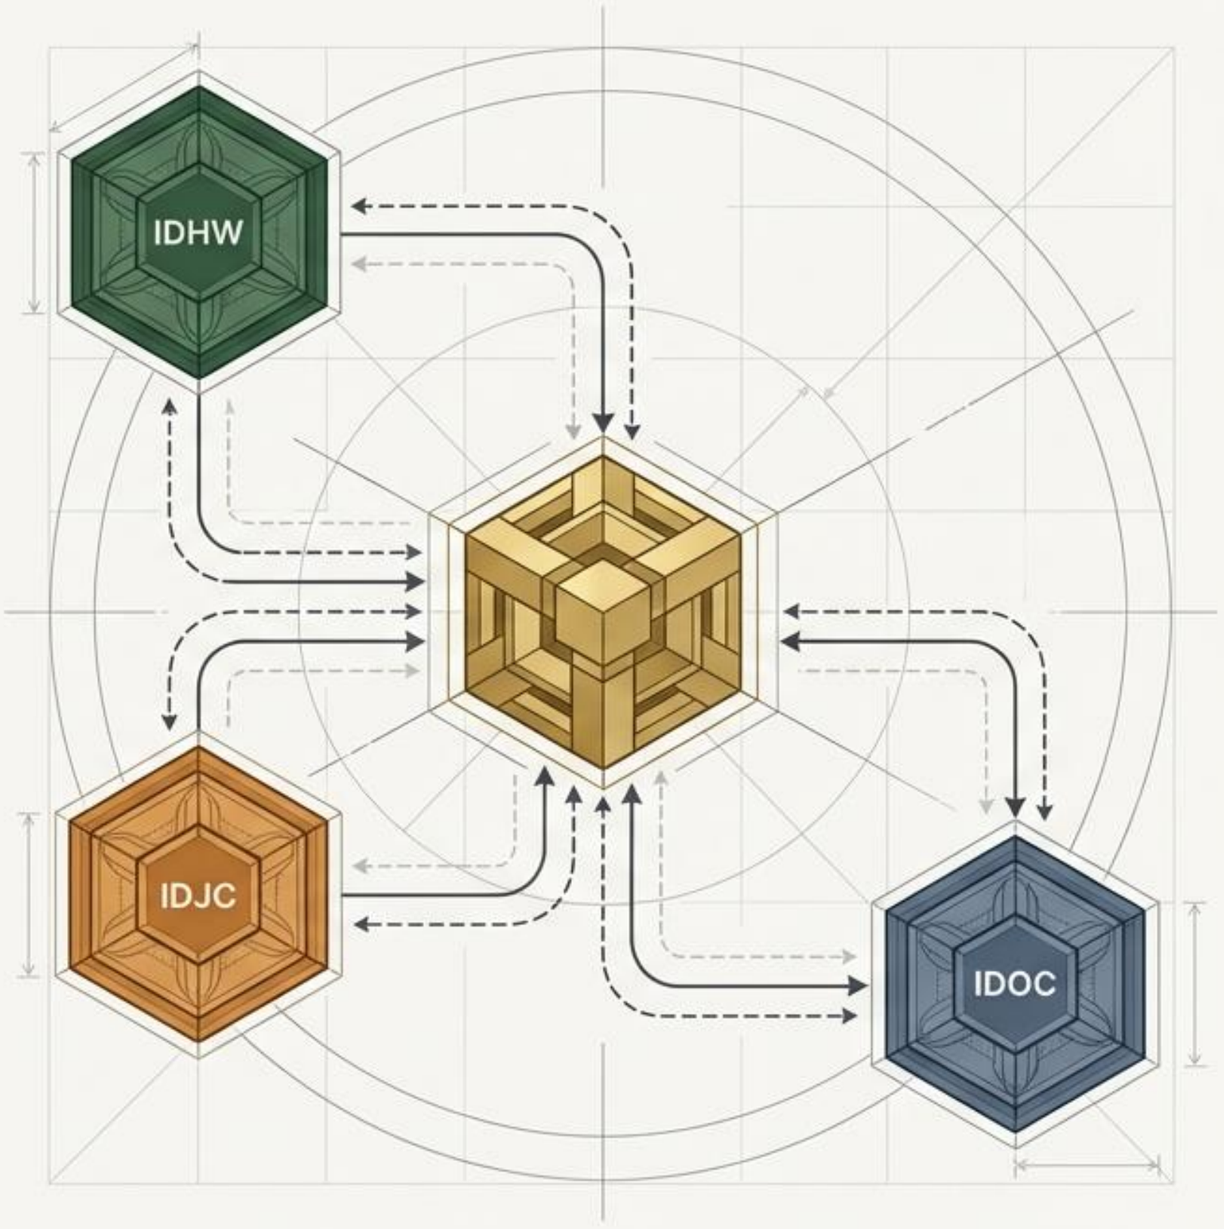
The Idaho AI Intelligence Swarm

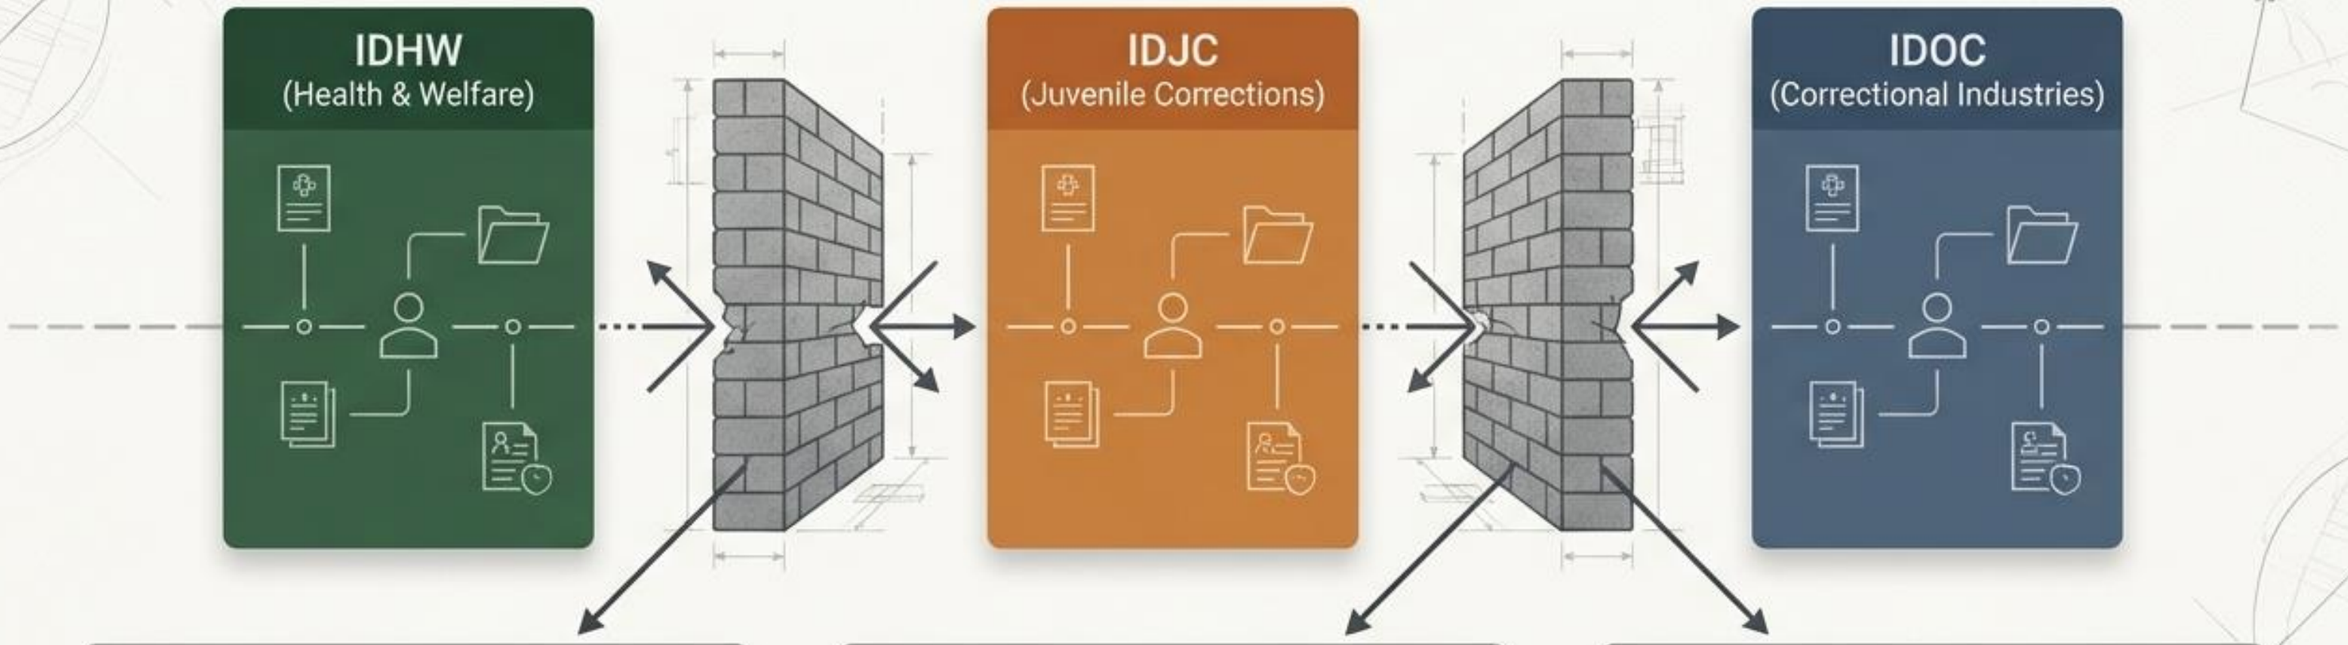
A Federated Intelligence Platform for Evidence-Based Government.

Next-generation decision-making for Health & Welfare, Juvenile Justice, and Adult Corrections.



Fractured Data Costs Idaho Time, Money, and Outcomes

Currently, IDHW, IDJC, and IDOC hold critical, life-saving data about Idaho citizens, but they operate in complete isolation.



Fragmented Decisions

Caseworkers and officers are forced to make high-stakes placement and release decisions without a complete picture of an individual's history.

Delayed Insights

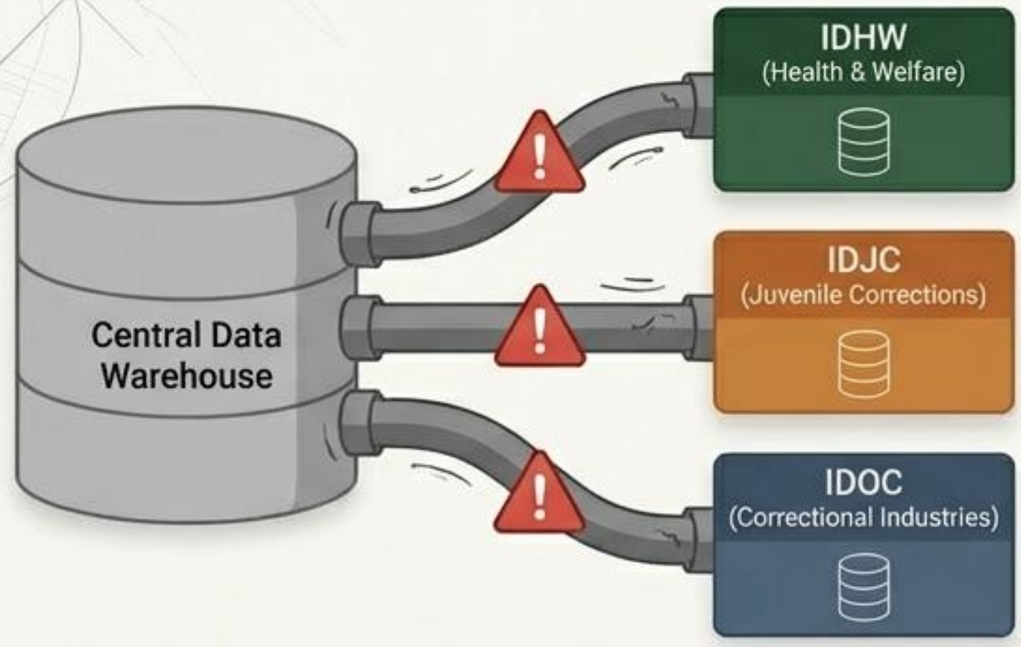
Connecting basic cross-agency dots requires weeks of manual coordination, emails, and cross-departmental requests.

Financial Drain

This siloed approach costs the state millions in wasted administrative hours and obscures the raw data required for accurate budget planning.

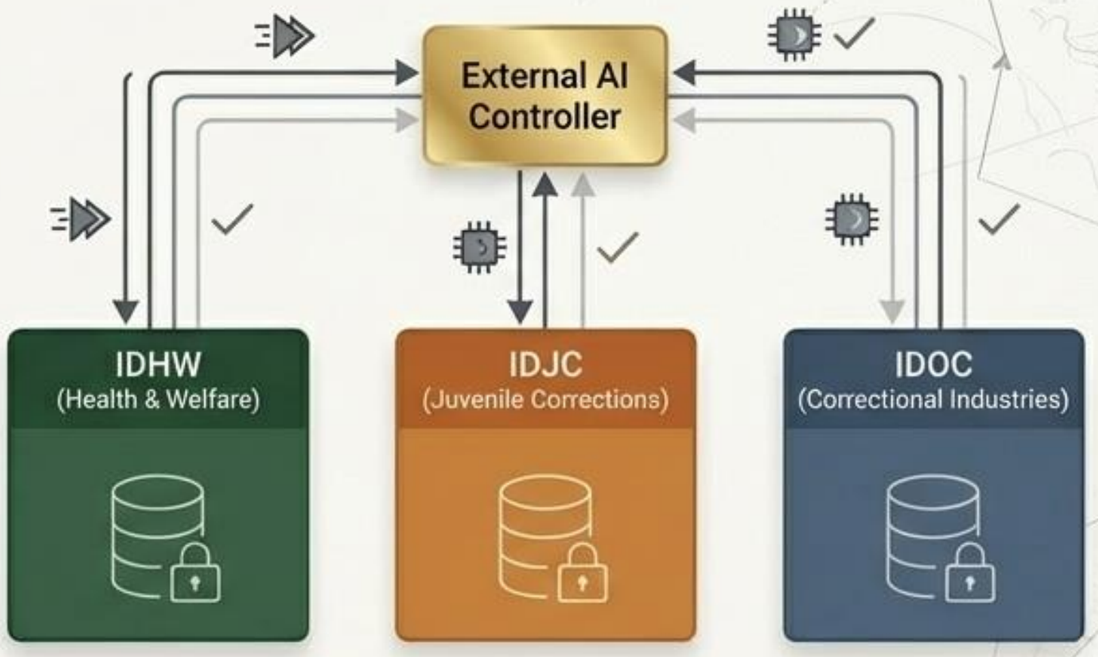
Stop Moving the Data. Start Moving the Intelligence.

The Old Way



Moves massive databases into a central pool.
High cost, high security risk, multi-year deployment.

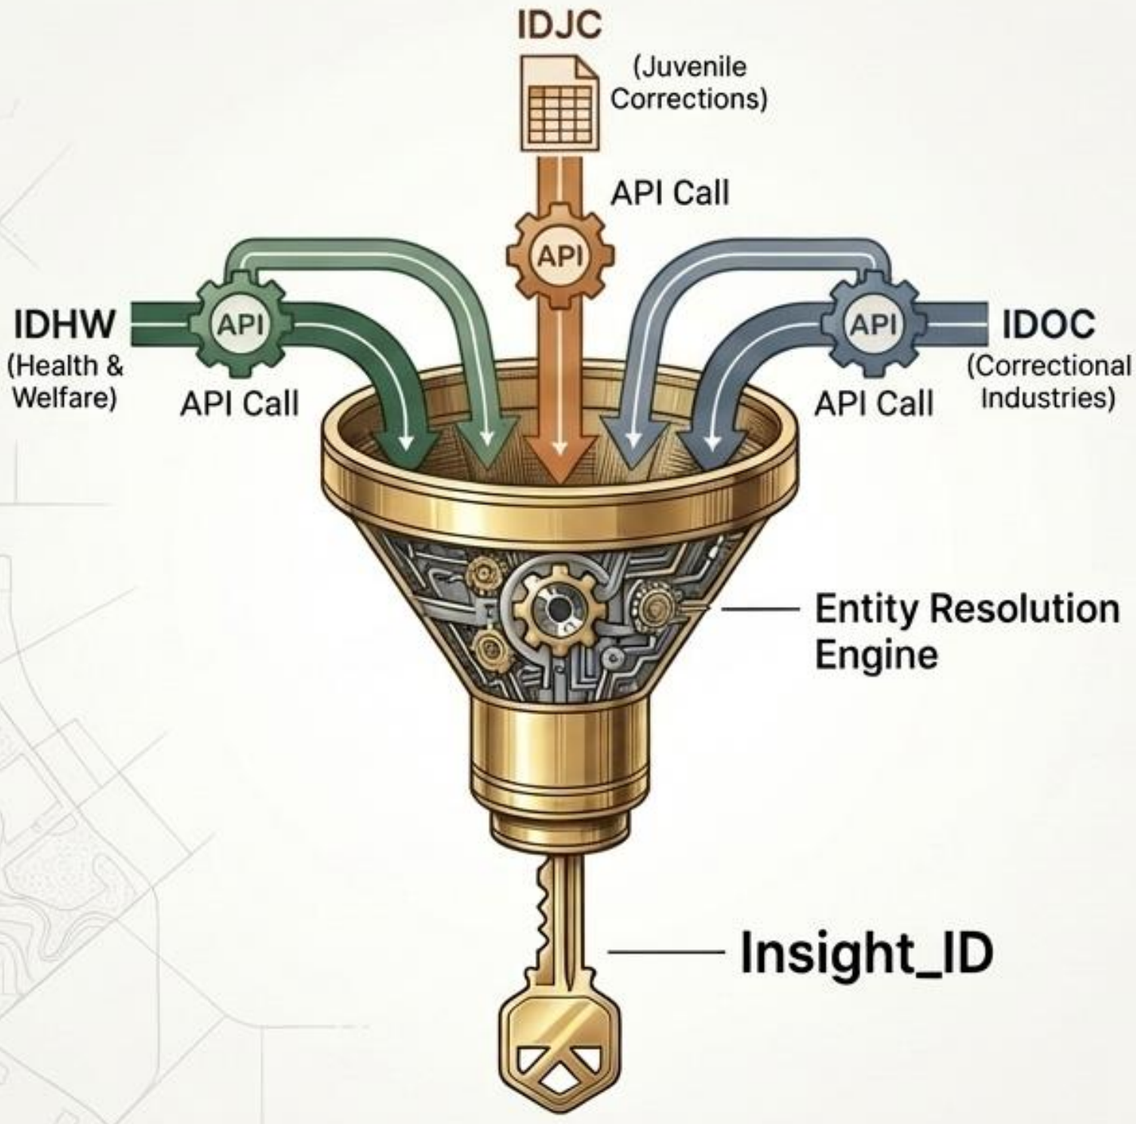
The AI Swarm



The Paradigm Shift: Data no longer has to move between agencies.

- **Internal Access**: Each agency is equipped with its own internal, secure **AI Agent** operating directly on agency-specific data servers.
- **External Coordination**: Internal agents securely connect to a centralized **External AI Controller**.
- **The Result**: We deploy federated intelligence. Query the agents for answers, entirely eliminating the massive financial and security burdens of traditional data warehousing.

The Golden Record Resides Securely at the State Controller's Office



The Hub

At the heart of the Swarm is a central identity hub located securely at the State Controller's Office.

Entity Resolution API

Agency data is normalized and passed through a rigorous 6-tier entity resolution engine. Effortlessly catches name misspellings, nickname variations, and missing data points across systems.

The Golden Record

Rather than centralizing sensitive personal files, the system generates a single, stable, anonymous identifier for a citizen.

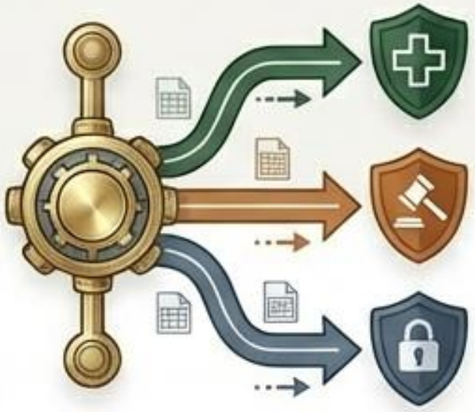
Unified Truth

Allows the Swarm to connect the dots across IDHW, IDJC, and IDOC seamlessly while maintaining total individual privacy.

The AI Swarm Executes Parallel Queries in Seconds

1. The Request

An authorized user asks a complex, cross-agency question in plain English.



2. Parallel Processing

The central AI Controller deploys the Swarm, simultaneously pinging the secure internal agents at IDHW, IDJC, and IDOC all at once.

3. Graph-Based Memory

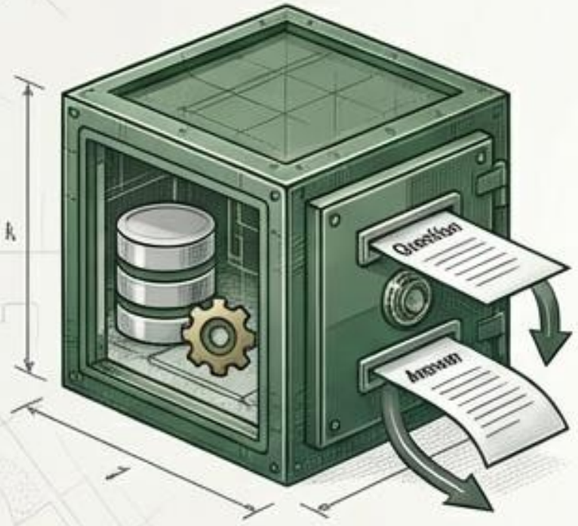
A high-speed relationship engine instantly maps complex connections (e.g., parent-to-child links) across the incoming data streams.

4. The Golden Insight

A complete, synthesized answer is delivered back to the user with a 100% auditable execution log.

CJIS & HIPAA Compliant

Zero Data Movement Guarantees Absolute Security



Data Stays Home

Sensitive records never leave their home agency. IDHW data stays completely inside IDHW. IDOC data stays completely inside IDOC.

Answers, Not Files

By bringing the reasoning process directly to the agency-specific data servers, the AI Agent only passes out the synthesized insight, never the raw personal file.

Audit & Compliance

Every single query is logged with a timestamp, the user identity, and the exact agencies queried, automatically satisfying strict state, CJIS, and HIPAA compliance requirements.

A Purpose-Built, Multi-Node Intelligence Engine

Swarm Platform Architecture

Relational Storage

Secures the structured, tabular data firmly at the local agency level.

Graph Memory

Powers the system's memory, instantly mapping complex family, juvenile, and adult criminal relationships across the state.

Vector Search

Enables fuzzy, intelligent semantic matching—catching human errors, typos, and name variations across disparate agency files.

Cache Queue

Ensures lightning-fast, parallel processing of state-wide requests, protecting existing state IT infrastructure from being overwhelmed.

Frontline Workers Gain Immediate Cross-Agency Visibility

Empowering Child Welfare

- Caseworkers save countless hours by automating manual cross-agency history lookups.
- When evaluating a home, caseworkers instantly see if there is an active IDJC or IDOC history.
- Placements are vastly safer and completed faster.

Empowering Corrections & Juvenile Justice

- Officers gain immediate insights into family dynamics and systemic history.
- Identify at-risk youth transitioning between juvenile and adult systems.
- Craft smarter, evidence-based post-release plans for incarcerated parents.

Faster Insights Directly Improve Outcomes for Idaho Families

The Critical Question: How many foster children in Idaho have a parent currently incarcerated?

Without Swarm:
3 to 6 Weeks

Requires weeks of manual coordination, legal review, and bouncing between agency desks.

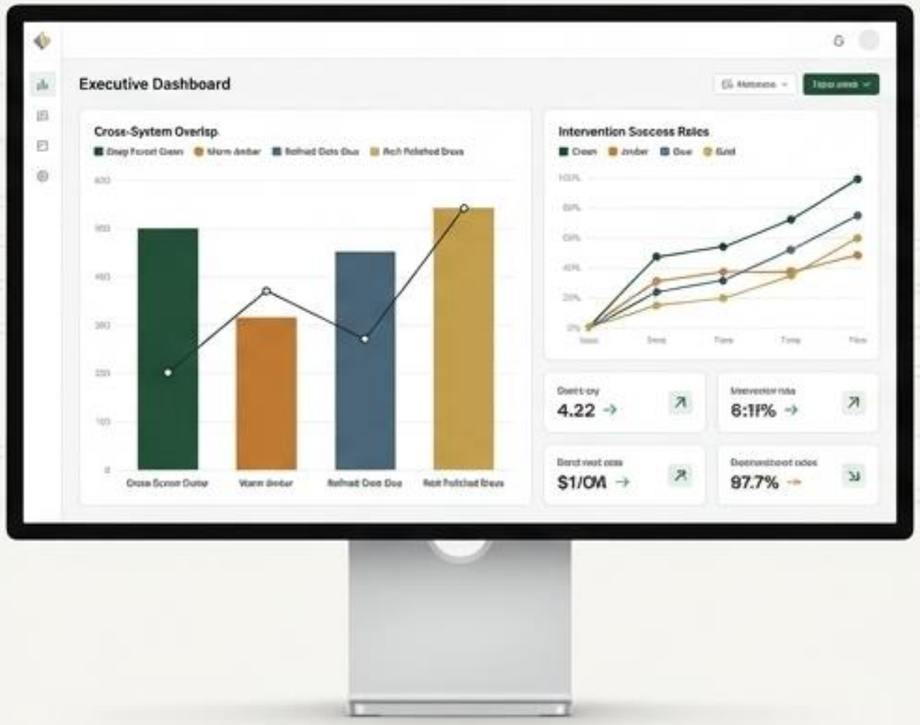
With Swarm:
Seconds

The answer is generated securely, accurately, and automatically.

The Human Outcome

When a corrections officer immediately knows a newly incarcerated individual has a child in the system, family reunification and support services can be prioritized instantly. Seconds vs. weeks means better care for Idaho's most vulnerable.

Agency Leaders Gain Unprecedented Data-Driven Budget Authority



Policy in Real-Time

Agency Directors can ask complex, multi-variable policy questions and receive answers instantly, without initiating month-long IT data pulls.

Irrefutable Budget Justifications

Generate highly accurate, data-driven financial requests for the legislature based on complete, cross-agency realities rather than siloed estimates.

Measure Effectiveness

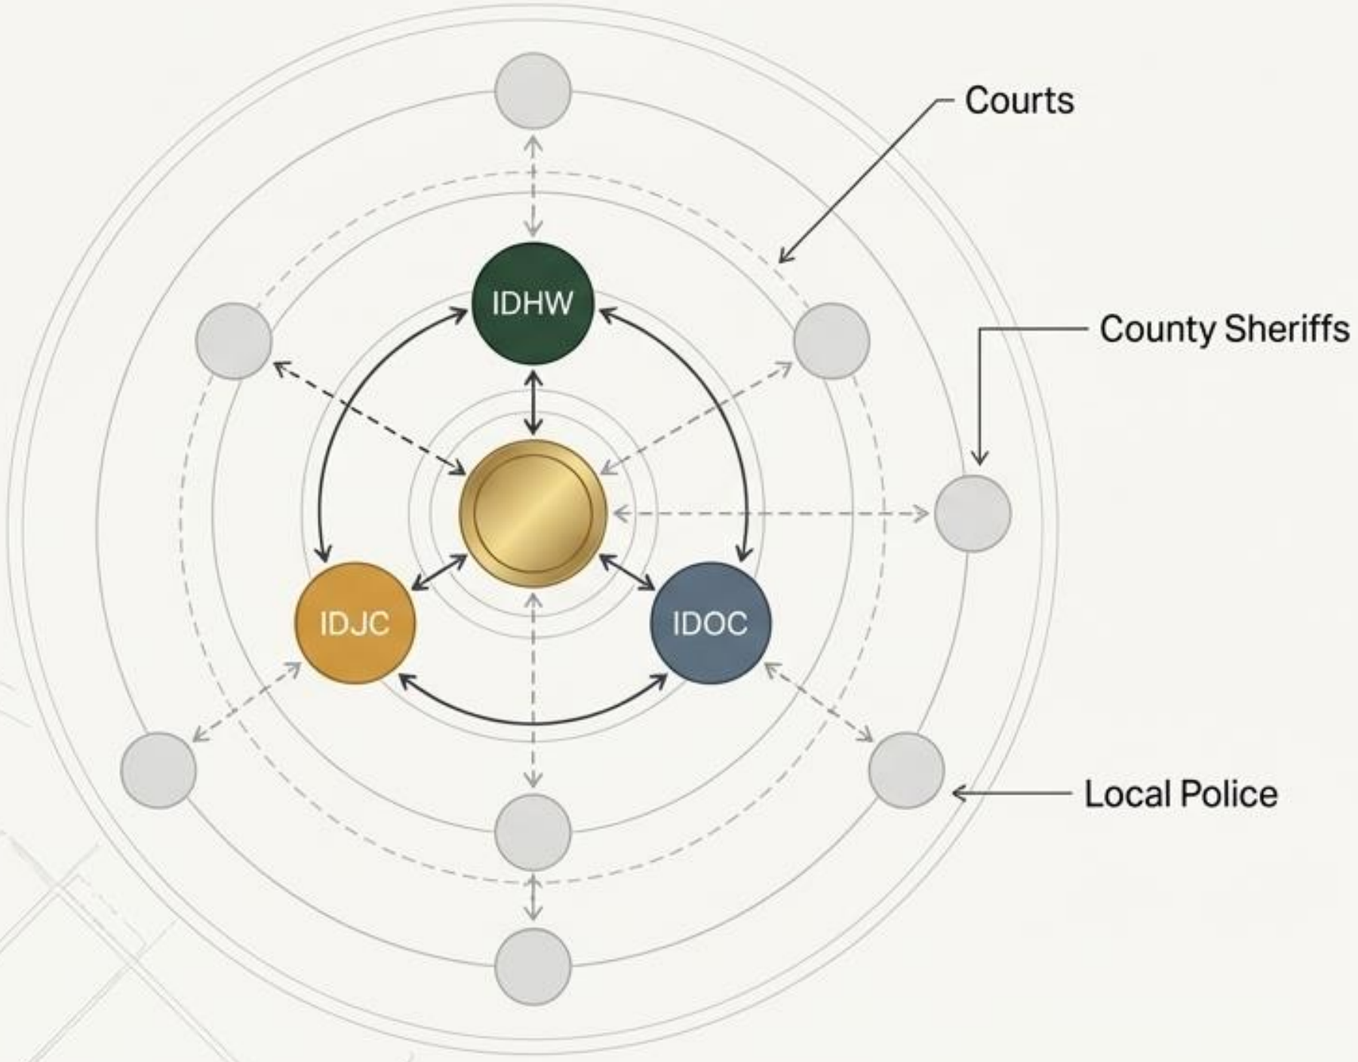
Prove the success of intervention programs by anonymously tracking citizen progress across the health, juvenile, and adult justice systems simultaneously.

Eliminating Data Movement Saves Millions in IT Infrastructure

Dimension	Traditional Government Data Merging	The AI Federated Swarm
Data Duplication	Pays to store duplicated massive databases.	Zero duplication; queries existing agency servers.
Legal & Compliance Friction	Years of cross-agency legal agreements to pool data.	Data never moves; bypasses pooled-data compliance hurdles.
Time to Value	Multi-year implementation timeline.	Deploys in months via lightweight internal APIs.

The Bottom Line: By reducing the time, effort, and IT infrastructure required to move information, the State of Idaho secures massive, immediate cost savings.

A Foundation Built to Scale Across Idaho Law Enforcement



Limitless Scale

The Swarm architecture is inherently modular and cloud-native.

Seamless Integration

Once the foundation is solidified with Health & Welfare, Juvenile, and Adult Corrections, the platform easily expands to ingest completely new organizational silos.

A Connected State

Enables unprecedented, secure cross-organizational intelligence inquiries across every level of Idaho government and law enforcement.

Transform Idaho's Siloed Data into Unified Action

Executive Recap

- Secure, internal AI agents query data without moving it.
- The Controller's Golden Record creates a unified identity hub.
- Instant cross-agency insights save money, time, and lives.

The Ask & Next Steps

1. Authorize the Platform Pilot

Approve the data foundation and initial agency integration.

2. Assign Agency Leads

Designate data liaisons for **IDHW**, **IDJC**, and **IDOC** to install the secure internal agents.

3. Deploy the Swarm

Set success metrics for query speed and accuracy, and set a new national standard for government decision-making.
